Curso de Reconocimiento de Patrones

1. Introducción
2. Extracción de características
3. Selección de características
4. Clasificación
5. Evaluación de desempeño
6. Agrupamiento

Capítulo 6. Clustering

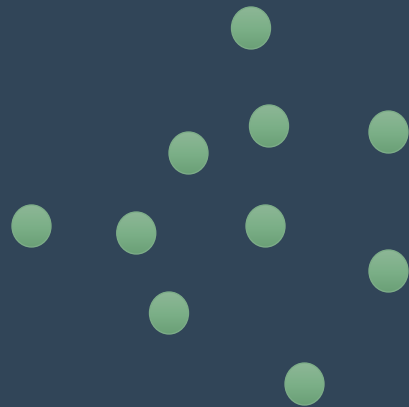

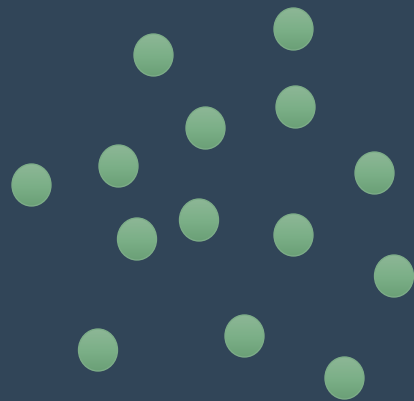

1. Introducción
2. Métodos de Partición (K-means)
3. Métodos Basados en Densidad y Centroides (Mean Shift)
4. Métodos Basados en Modelos (Gaussian Mixture Models)
5. Métodos Jerárquicos (Hierarchical Clustering)
6. Bolsa de palabras (Bag of Words)

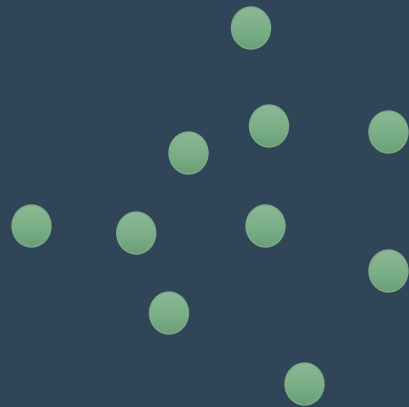

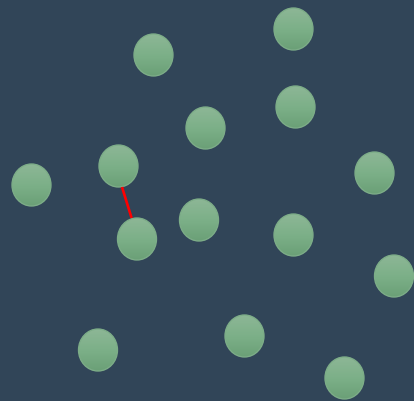

Hierarchical Clustering (Cúmulos Jerárquicos)

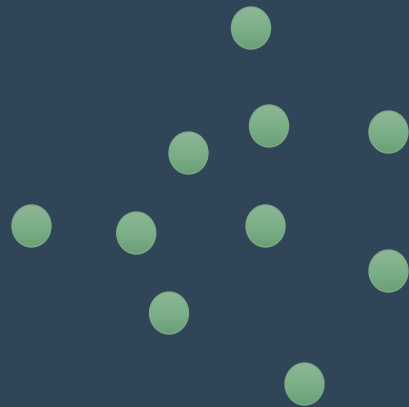

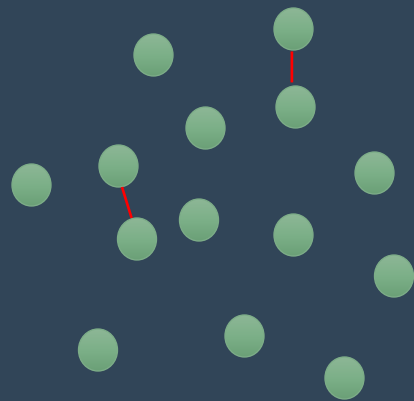

Cúmulos Jerárquicos (Hierarchical Clustering)

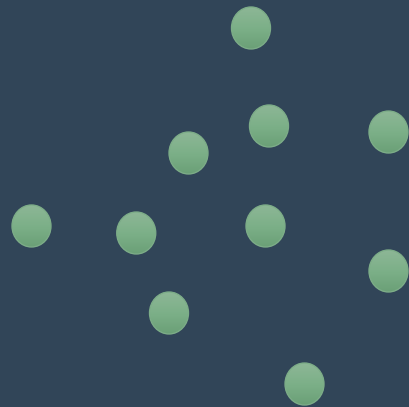

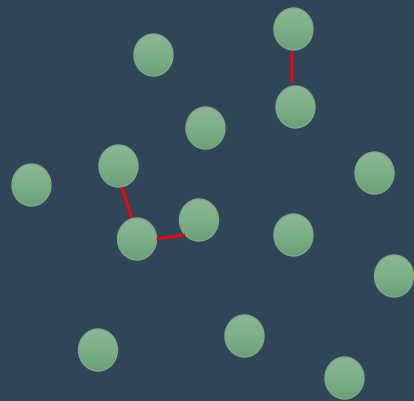

Idea General:

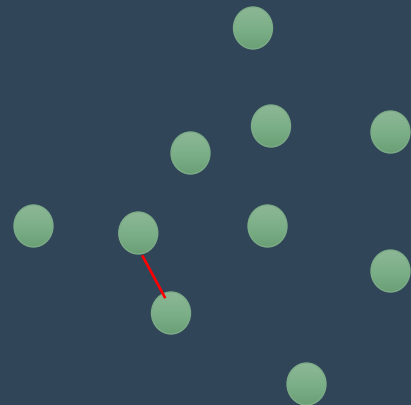

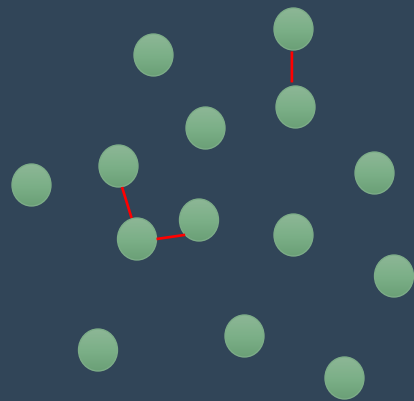

- Encuentra los dos puntos más cercanos y agrúpalos
- Los puntos agrupados son considerados como un nuevo punto
- Repite hasta que la distancia entre los dos puntos más cercanos sea demasiado larga

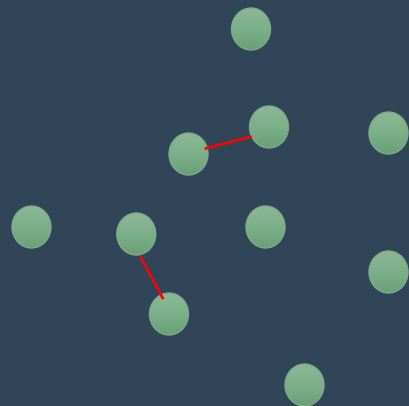

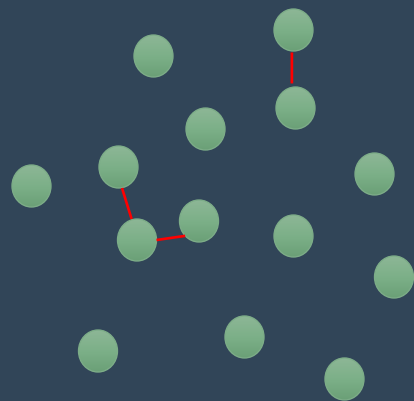

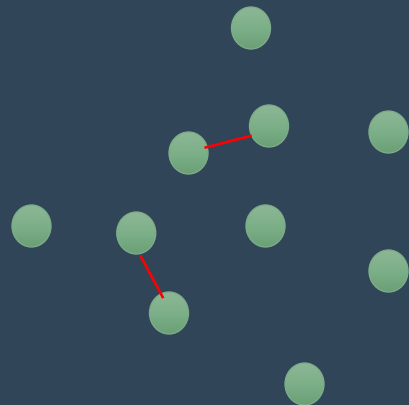

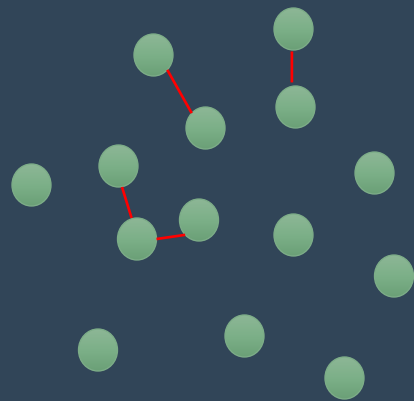

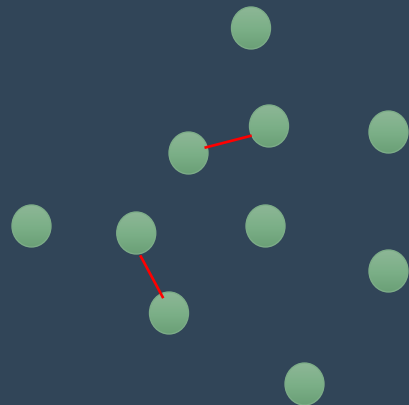

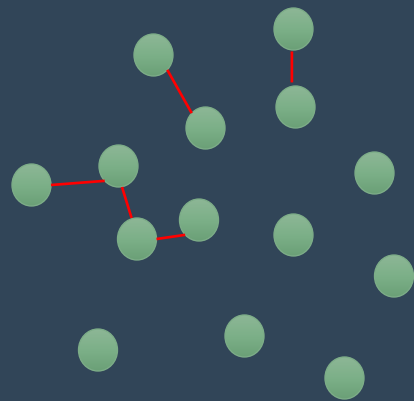

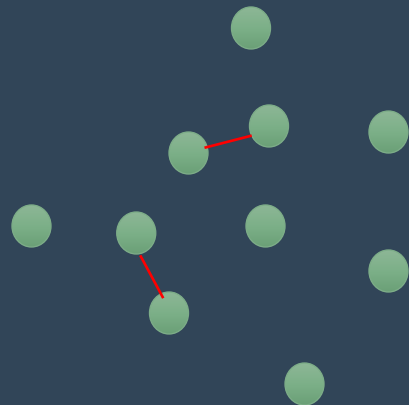

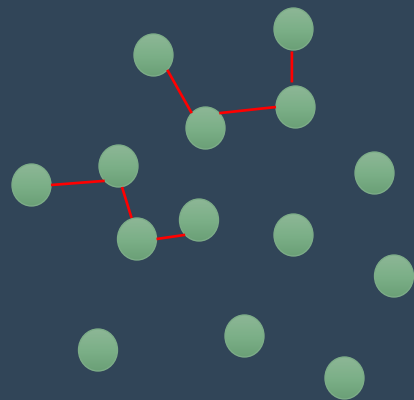

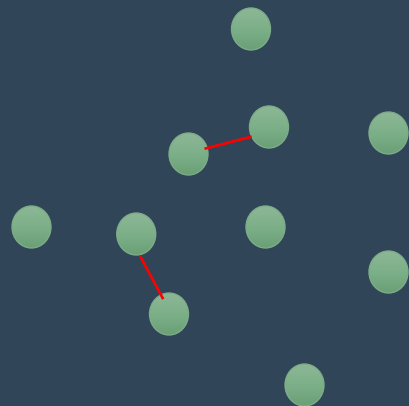

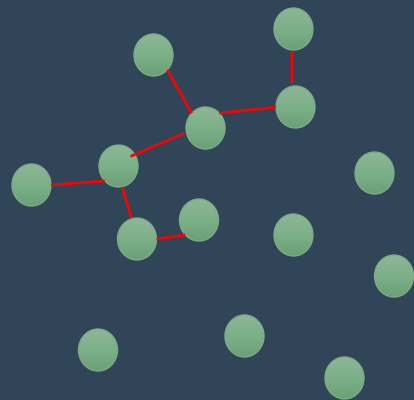

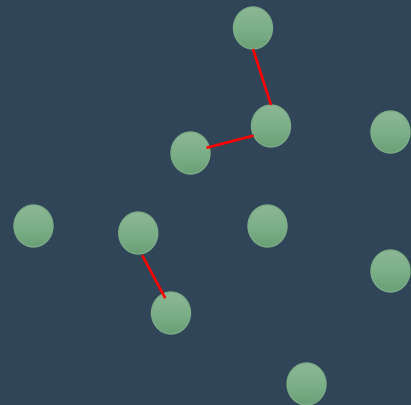

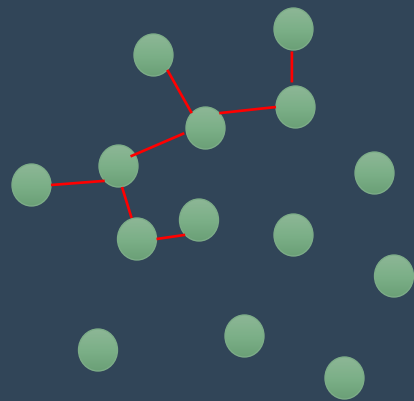

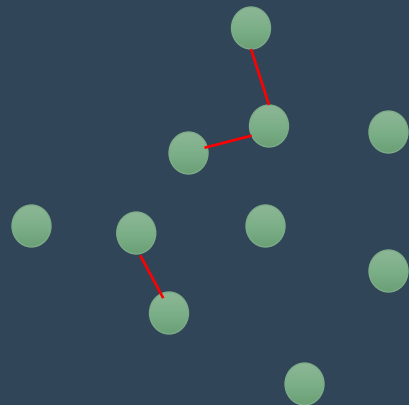

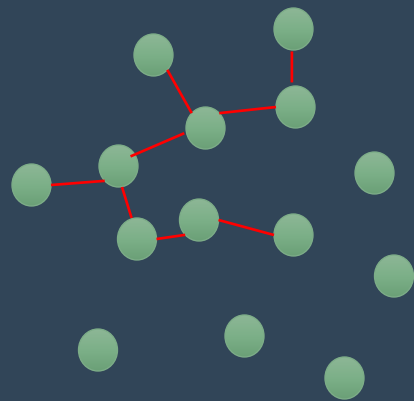

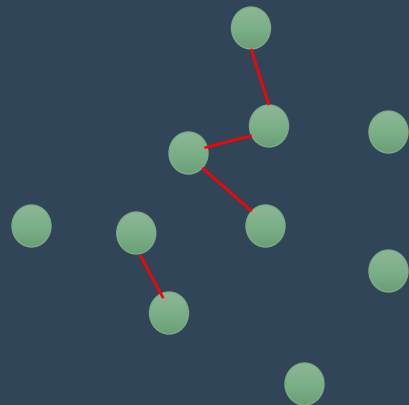

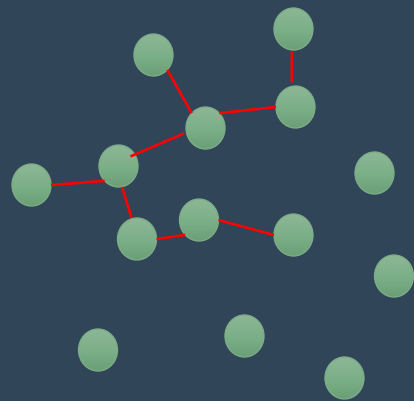

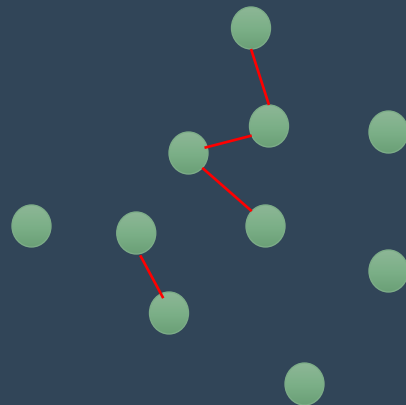

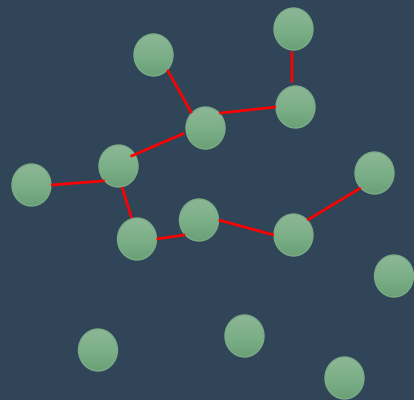

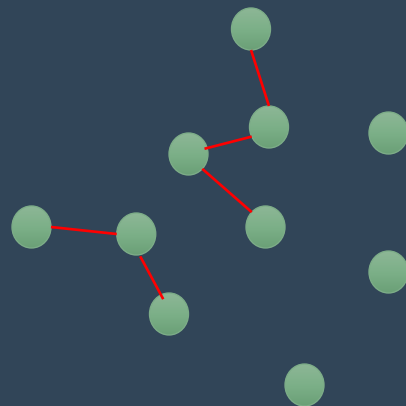

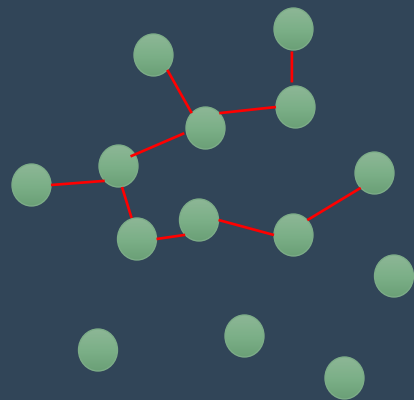

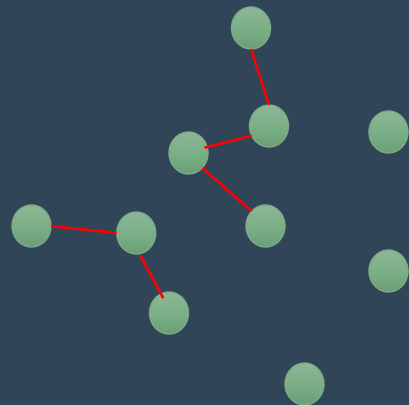

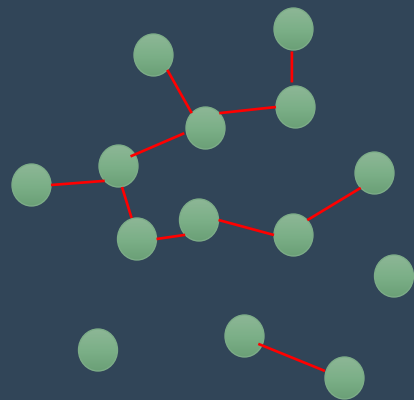

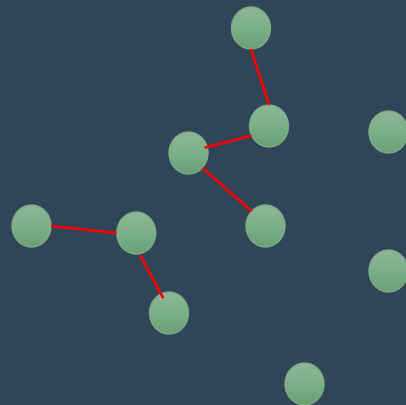

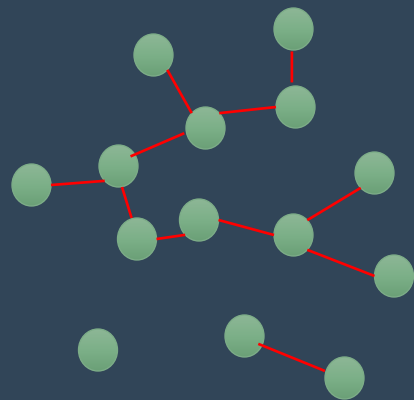

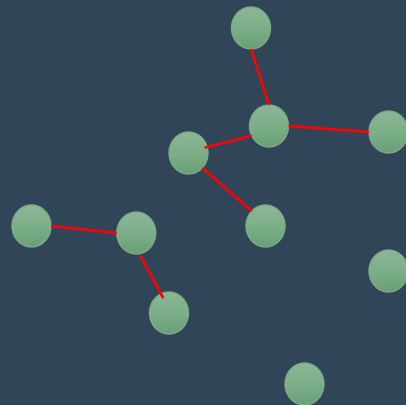

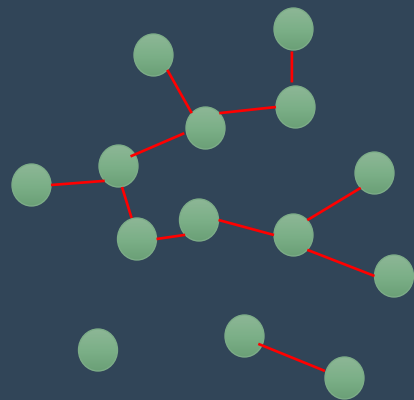

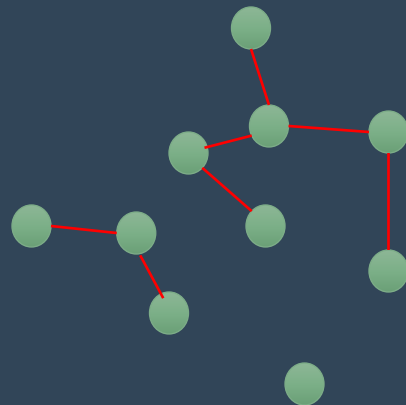

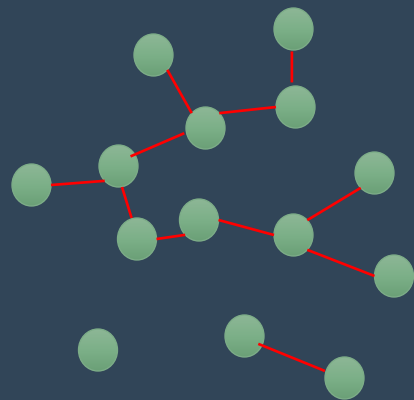

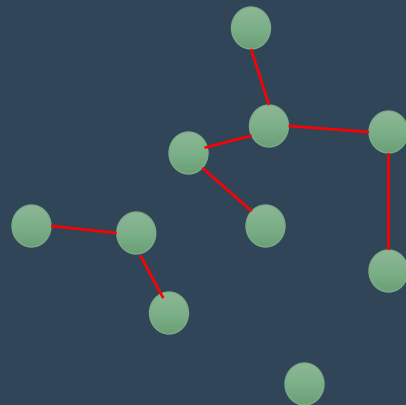

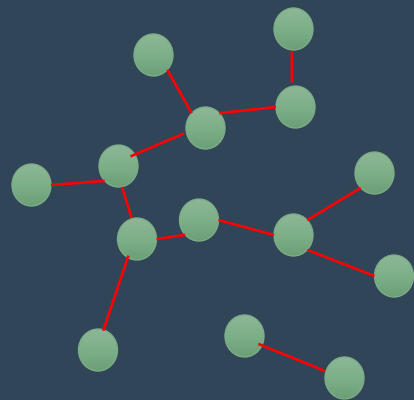

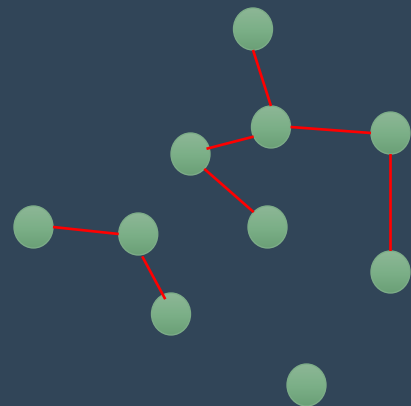

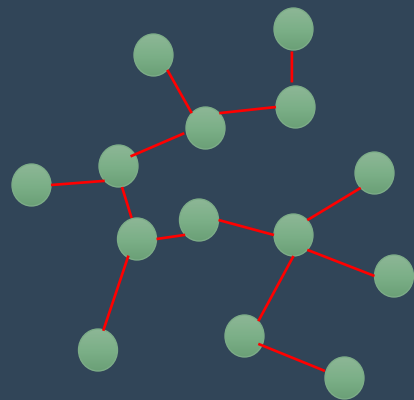

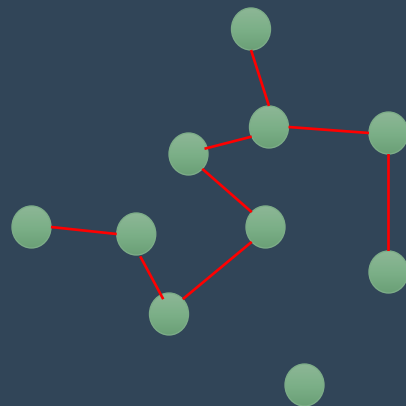

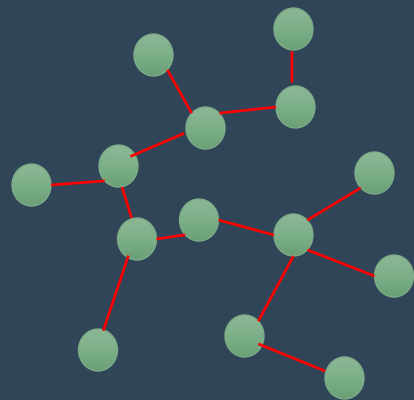

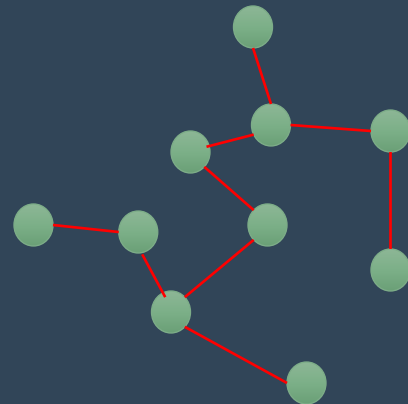

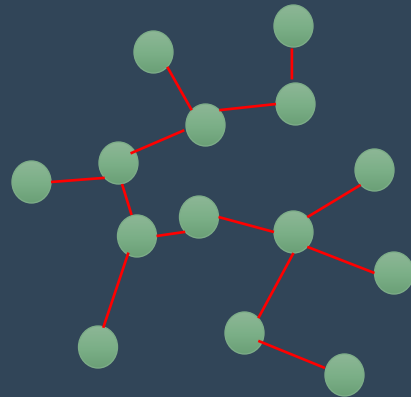

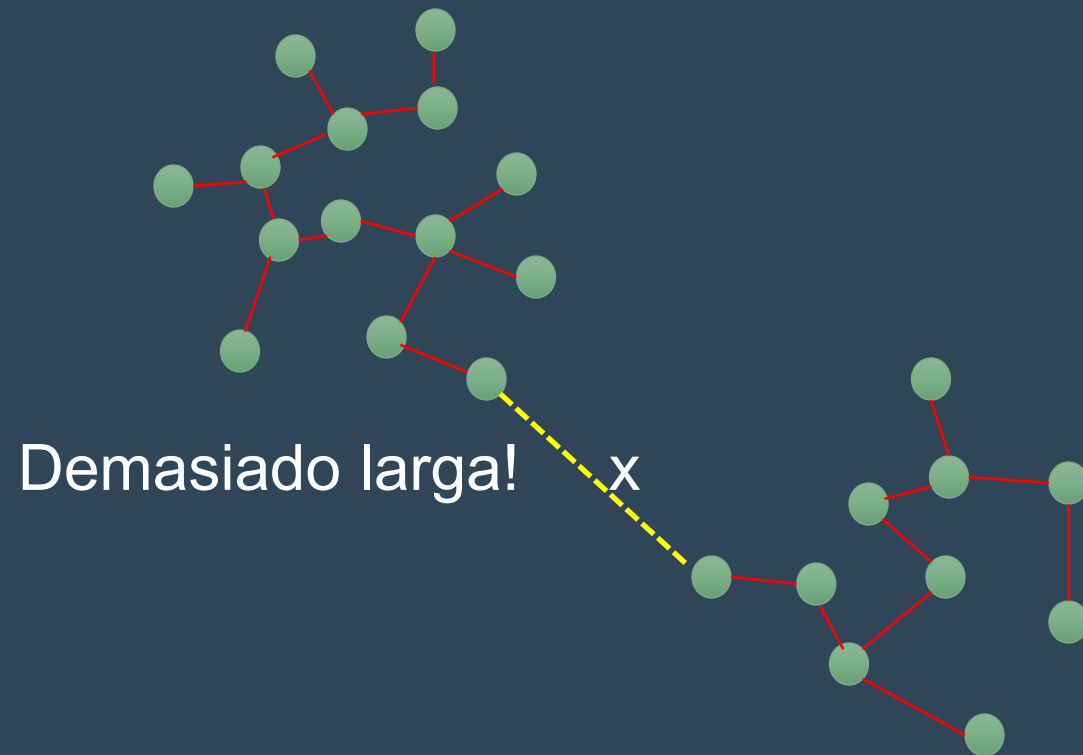

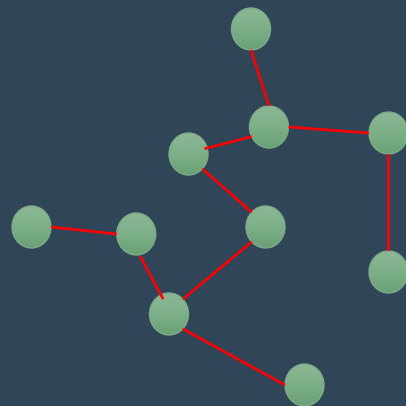

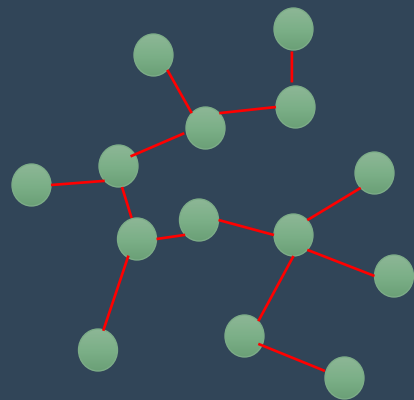

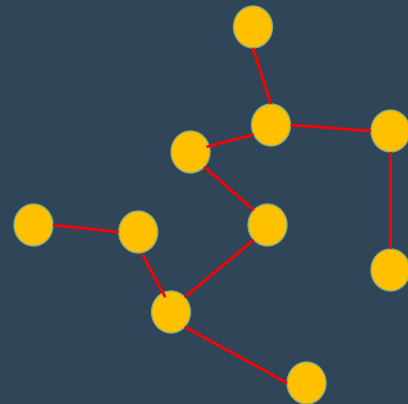

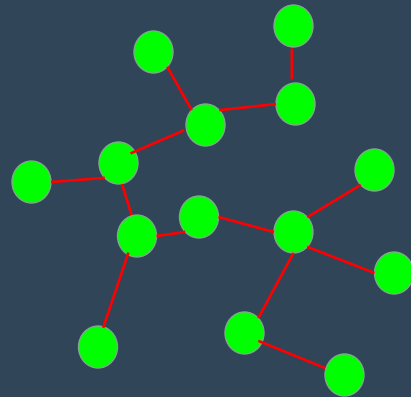

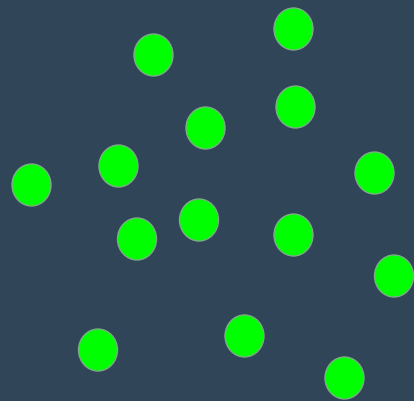

Cúmulos Gerárquicos (Hierarchical Clustering)

Idea General:

- Encuentra los dos puntos más cercanos y agrúpalos
- Los puntos agrupados son considerados como un nuevo punto
- Repite hasta que la distancia entre los dos puntos más cercanos sea demasiado larga

Ejemplos de algoritmos de agrupamiento (clustering) programados en python
